

SolutionArchitecture

Date	15 July 2026
TeamID	SWUID2026221635
ProjectName	A Comprehensive Measure of Well-Being (HDI Prediction & Analysis)
Maximum Marks	5 Marks

SolutionArchitectureDiagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

ComponentDescriptionTable

ComponentName	Description/RoleinArchitecture	TechnologiesUsed
<i>PresentationLayer</i>	Serves as the interactive user interface where policymakers input data sliders (Life Expectancy, Schooling Years, GNI) and view analytical visualizations.	HTML5, CSS3, JavaScript, Tailwind CSS
<i>APIGateway</i>	Handles incoming HTTP requests, directs user metrics securely to the core processing scripts, and manages internal template routing.	Flask Routing Engine
<i>Microservices</i>	Runs data preprocessing tasks, loads the pre-trained machine learning model (.pkl file), extracts classification predictions, and generates visual analytical graphs.	Python, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn
<i>Database</i>	Securely stores structured raw dataset tables used for historical baseline metrics and logs user prediction inputs for tracking progress.	Mongo DB / CSV Files
